

**We are a small, young independent company with a clear strategic direction, as well as a strong focus on customer orientation and quality. As one of the market leaders, we develop high-quality dental implants made of zirconium dioxide and sell them worldwide through an international network.**

To support our development team, we are looking for the following with immediate effect or by appointment:

## **Development Engineer (R&D) 100% for Dental Implants and Instruments, Oensingen (m/f/d)**

### **Your tasks**

- Development of dental products (implants, instruments, accessories)
- Independent technical collaboration in development (sub-project management)
- Maintaining and living the internal Q guidelines
- Creation of internal Q documents from development to validation
- Various process-supporting work in development and production
- Modify and create drawings and 3D models with SolidWorks
- Creation of models for marketing, software integration

### **What you bring to the table**

- Experience with CAD (SolidWorks), from conception to implementation in series production
- Team spirit, independence and a structured way of working
- Self-motivated team player who enjoys working in an extended team
- Fluent in written and spoken German, good English skills are an advantage
- Ideally, knowledge and experience in the design of dental medical devices

### **What to expect**

- A permanent position in an innovative, fast-growing company
- Diverse tasks and independent action
- Performance-related, competitive remuneration
- Cohesion and mutual support in a small team

Do you feel that this exciting challenge appeals to you? Then we would be pleased if you send your complete CV with a letter of motivation to [michaela.ritzmann@zsystems.com](mailto:michaela.ritzmann@zsystems.com) in digital form .
